

ICRS 2026 — Full Talk Grid

15th International Coral Reef Symposium · Auckland, New Zealand · 19–24 July 2026

Every individual talk in the symposium, laid out as a time-by-room grid. On each day page the left column is the time block and each remaining column is a meeting room, so all sessions in one row run **at the same time**. Within each cell the session code and theme appear first, then each presentation with its own start time, title and presenting author. Venue-wide items (plenaries, teas, lunches, posters, socials) appear as full-width coloured bands.

1,480 talks across 223 concurrent sessions in 14 parallel rooms (Te Paepae Theatre + Rooms 301, 302, 305, 501–505, 513, 515–518), plus plenaries and posters. Sunday 19 July (registration + welcome only) is omitted here; see the overview grid for it.

Day 2 Tuesday 21 July

[illegible]

[illegible]

Time	Te Paepae	301	302	305	501	502	503	504	505	513	515	516	517	518
8a–1p	Registration open Day 5													
8:30a – 10a	5A #130 Dynamics of coral bleaching and coral community structure in a rapidly warming ocean	5A #35 Climate-smart reef restoration: Integrating climate resilience into coral reef restoration practices	5A #52 Exploring the sustainability and resilience of coral reef fisheries	5A #26 Cryptic diversity, hybridization, and chimerism and their influence on ecology and evolution	5A #81 Predicting coral response to climate perturbations through trait-based assessments	5A #96 Escaping climate change: The effect of latitudinal gradients, on organismal physiology, ecology, and evolution	5A #123 The human–AI nexus: Scaling trustworthy coral reef monitoring and management	5A #29 Innovations in coral disturbance preparedness and response	5A #65 Understanding development across biological scales of coral and other marine invertebrates	5A #98 Eco-evolutionary responses of reef organisms to anthropogenic climate change	5A #19 Modeling coral reef ecosystems across scales	5A #93 Microbial symbiosis in the reef: what do we know and where do we go?	5A #104 Inter-kingdom interactions in the coral holobiont	5A #116 Biodiversity and transformation in Indian Ocean coral reefs
	8:30a No coral recovery three years after a major bleaching event in reefs in the Southwestern Atlantic refugium. <i>Ms Beatriz Corazza</i>	8:30a Integrating evolutionary adaptation into reef rehabilitation to build climate change resilience. <i>Dr Adriana Humanes</i>	8:30a Towards nutrition-sensitive coral reef food systems	8:30a Genomic Evidence of Cryptic Species and Habitat Specialization in the Brooding Coral <i>Seriatopora hystrix</i> Along the Great Barrier Reef. <i>Ms Itha Byrne</i>	8:30a A multi-omic analysis to identify genetic and non-genetic drivers of coral thermotolerance. <i>Dr Jeremie Vidal-Dupol</i>	8:30a SPECIES ON THE MOVE – PHYSIOLOGICAL ACCLIMATION AND ADAPTATION ARE THE KEYS TO PREDICTING CORAL HABITATS OF THE FUTURE. <i>Mr Joseph Brennan</i>	8:30a CoralNet-Toolbox: Automation for Panoptic Segmentation of Benthic Habitat and Large Area Imagery. <i>Mr Jordan Pierce</i>	8:30a Coordinated efforts to prevent, prepare for, and respond to disturbance events on U.S. coral reefs. <i>Mrs. Dana Wusnich-Mendez</i>	8:30a Small RNAs in Coral and Cnidarian Sperm: Implications for Epigenetic Inheritance and Early Development. <i>Dr Jill Ashey</i>	8:30a What can we learn from 1000 coral genomes? <i>Dr Ira Cooke</i>	8:30a Mapping and modeling coral metacommunities to aid understanding of a severe epizootic disease. <i>Dr Benjamin Farmer</i>	8:30a Comparative hologenomics of reef-building corals highlights diversity, lifestyle, and genome evolution of endosymbiotic dinoflagellates. <i>Mr Hisatake Ishida</i>	8:30a Assessing the Metabolic Complementarity of The Cnidarian Tripartite Symbiosis. <i>Mr Diego Lera-Lozano</i>	8:30a Species diversity, loss and the reconfiguration of coral reefs in the SE Indian Ocean. <i>Dr Zoe Richards</i>
	8:45a Coral mortality in a mass bleaching event influenced by proximity to diseased tissue and reef topography. <i>Camilla Nilsson</i>	8:45a Data Mining and Data Archiving to Support Management of Coral Resilience. <i>A/Prof Katrina McGuigan</i>	8:45a Vitamin Sea: resilience and vulnerability of nutrient sources in coral reef fisheries subjected to climate change. <i>Dr Maria Eggertsen</i>	8:45a Rethinking depth-generalism in Caribbean corals: cryptic diversity and microhabitat partitioning. <i>Maxine Mouly</i>	8:45a The strengths, limitations, and unknowns of acute thermal stress testing and the Coral Bleaching Automated Stress System (CBASS). <i>Dr Dan Barshis</i>	8:45a DenseCoralNet: Advancing CoralNet Toward Dense Benthic Understanding via Cost-Free Densification with AI Foundation Models. <i>Prof Sai-Kit Young</i>	8:45a DenseCoralNet: Advancing CoralNet Toward Dense Benthic Understanding via Cost-Free Densification with AI Foundation Models. <i>Prof Sai-Kit Young</i>	8:45a Mobilizing a Regional MPA Network to Respond to Coral Disturbances in the Caribbean – the MPACConnect Experience. <i>Ms Emma Doyle</i>	8:45a Genome-wide segregation distortion reveals candidate viability loci in coral larvae and settlers. <i>Ms Daisy Flores</i>	8:45a Population genomics of the stony coral <i>Acropora millepora</i> and its symbionts across the Great Barrier Reef. <i>Ajun Sai Krishnan</i>	8:45a Quantitatively linking within-host symbiont density to coral growth rate. <i>Dr David Anderson</i>	8:45a Photosynthetic dependence and filament production in physical bacterial-Symbiodiniaceae interactions. <i>Dr Cawa Tran</i>	8:45a Photosynthetic dependence and filament production in physical bacterial-Symbiodiniaceae interactions. <i>Dr Cawa Tran</i>	8:45a Longer, higher, broader – multidimensional record-breaking 2025 heat stress on Western Australia's coral reefs. <i>Prof Scott Heron</i>
	9a Reef-associated seawater microbiome responses to sustained marine heatwaves on the Great Barrier Reef: Associations with coral bleaching, mortality and shifting reef community dynamics.. <i>Dr Patrick Laffy</i>	9a Are coral restoration sites on the right track? Thermal stress episodes, turbidity, and depth as criteria for the assessment of the suitability of current coral restoration sites. <i>Dr Michelle Amario</i>	9a Thermal vulnerability of reef fish and implications for subsistence fisheries throughout the Caribbean. <i>Dr Mary Cortese</i>	9a Speciation across depth gradients in reef corals. <i>Dr Carlos Prada</i>	9a Metabolome signatures prior to heat stress can predict tolerance across diverse coral–algal associations. <i>Dr Sabrina Rosset</i>	9a Unifying Disparate Reef Data: A Concept Bottleneck Approach to Global-Scale Coral Reef Segmentation. <i>Mr Viktor Domazetoski</i>	9a Unifying Disparate Reef Data: A Concept Bottleneck Approach to Global-Scale Coral Reef Segmentation. <i>Mr Viktor Domazetoski</i>	9a Integrating Emergency Response and Disturbance Efforts in Puerto Rico. <i>Dr Maria Vega Rodriguez</i>	8:50a Effects of Artificial Light at Night on gene expression in the coral, <i>Acropora digitifera</i> . <i>Mr Kelly Rome Publico</i>	8:50a EMERGENT SYMBIOTIC STABILITY IN CNIDARIAN-SYMBIODINIACEAE PARTNERSHIPS: A MATHEMATICAL MODEL OF BIOPHYSICAL NITROGEN REGULATION. <i>Mr Andres Novoa</i>	8:50a Genome evolution and adaptive potential of endolithic algae <i>Ostreobium</i> in coral bleaching recovery. <i>Dr Manuel Poretti</i>	8:50a Microbial-Symbiodiniaceae dynamics and provenance contributed to differential Acroporid bleaching and survival following the 2023 marine heatwave on Florida's Coral Reef. <i>Dr Elise Keister</i>	8:50a Microbial-Symbiodiniaceae dynamics and provenance contributed to differential Acroporid bleaching and survival following the 2023 marine heatwave on Florida's Coral Reef. <i>Dr Elise Keister</i>	8:50a Four-year ecological trajectories reveal an accelerated Short-term decline of coral and fish communities and shift toward algal dominance in the Loky Mananabato Marine Protected Area, Leven Archipelagos, Madagascar. <i>Dr Radonirina Lebelly Botosoamananto</i>
	9:15a When variability helps—or hurts: Coral responses to an extreme marine heatwave across a natural thermal gradient. <i>Ms Marcelina Marynke</i>	9:15a Heat selection of sexually propagated corals for use in proactive restoration. <i>Mr Carlo Caruso</i>	9:15a Climate resilience attributes of indigenous multi-species fisheries. <i>Dr Sangeeta Mangubhai</i>	9:15a Livelihoods at risk: How climate vulnerability links fishing families and reef fish populations. <i>Mr Irfan Assidig</i>	9:15a Global Mapping of coral stress response: Enhancing coral restoration through predictive thermal tolerance modelling. <i>Dr Raymond Banister</i>	9:15a Scaling large-area imagery annotation: a multi-view approach to semi-automated percent cover estimation. <i>Mr Vid Petrovic</i>	9:15a Scaling large-area imagery annotation: a multi-view approach to semi-automated percent cover estimation. <i>Mr Vid Petrovic</i>	9:15a Brick by brick: The efficacy and efficiency of keeping corals alive through disease intervention. <i>Dr Karen Neely</i>	8:55a Stereols are key to coral larvae survival, swimming capacity, and thermal tolerance. <i>Dr Jen Matthews</i>	8:55a Multi-scale biophysical modeling explains contrasted coral connectivity and genetic structure in the high-relief basin of the Aruba-Bonaire-Curaçao islands. <i>Dr Emmanuel Hanert</i>	8:55a The ecology and evolution of coral-infecting apicomplexans (coralicolids). <i>Dr Anthony Bonacola</i>	8:55a Genomics-powered insights into diversity, ecology and evolution of coral algal symbionts. <i>A/Prof Cheong Xin Chan</i>	8:55a Genomics-powered insights into diversity, ecology and evolution of coral algal symbionts. <i>A/Prof Cheong Xin Chan</i>	8:55a Post-disturbance dynamics on coral reefs: Legacy effects of a deoxygenation event in Bill's Bay, Ningaloo Reef. <i>Ms Grace Middleton</i>
9:20a Not All Reefs Bleached: Upwelling-Driven Thermal Refugia on Lyudao (Green Island) in Taiwan During the Fourth Global Event. <i>Dr Ya-Yi Huang</i>	9:20a Ecological bases for choosing coral species for restoration in Brazil. <i>Mr José Bastos</i>	9:20a Livelihoods at risk: How climate vulnerability links fishing families and reef fish populations. <i>Mr Irfan Assidig</i>	9:20a Developing the Pacific Ciguatera Network to Understand Ciguatera Poisoning in the Pacific Islands. <i>Prof Eileen Nalley</i>	9:20a Physiological and thermal tolerance plasticity differs across cryptic coral lineages. <i>Adrian Cheh</i>	9:20a Ensemble Deep Learning for Large-Scale Coral Reef Mapping: Increasing Thematic Detail with Hyper-Spectral Imagery in an Island-wide Survey. <i>Dr Daniel Schürholz</i>	9:20a Ensemble Deep Learning for Large-Scale Coral Reef Mapping: Increasing Thematic Detail with Hyper-Spectral Imagery in an Island-wide Survey. <i>Dr Daniel Schürholz</i>	9:20a Vulnerability of Pacific reefs to stony coral tissue loss disease. <i>Dr Michael Studvan</i>	9:30a Symbiotic state and life stage alter the lipidomic profiles of <i>Exaptasia diaphana</i> . <i>Dr Erick White</i>	9:30a Mechanisms to Improve Coral Reef Resilience in Sediment- and Nutrient-Impacted Environments: A Theoretical Analysis. <i>Mr. Jacob Snyder</i>	9:30a Genomics-powered insights into diversity, ecology and evolution of coral algal symbionts. <i>A/Prof Cheong Xin Chan</i>	9:30a Somalia's First Quantitative Baseline of Coral Reef Flats: Patterns of Spatial Variability. <i>Mr AHMED SH IBRAHIM SHABA</i>	9:30a Somalia's First Quantitative Baseline of Coral Reef Flats: Patterns of Spatial Variability. <i>Mr AHMED SH IBRAHIM SHABA</i>	9:30a Reef Resilience Assessment Along India's marginal west coast reefs reveals opportunities for management. <i>Mr Farai Divan Patel</i>	
9:25a Low Coral Mortality During the First Major Bleaching Event in Raja Ampat. <i>Ms Mariana Acipreste</i>	9:25a Artificial Shading Improves Photophysiological Performance and mitigates Bleaching of Nursery Corals during the 2025 Extreme Bleaching Event in Mauritius, Western Indian Ocean. <i>Mr Shakael Yavan Jogee</i>	9:25a From fish to fisheries: rethinking catchability in a changing world. <i>Ms Zoe Storm</i>	9:25a Reef Fish Nutrient Content Across Indonesia and the Philippines: Assessing Nutrient Dynamics Under Climate Change. <i>Miss Pindah Talitha Vida</i>	9:25a Exploring how cryptic diversity interacts with environment to determine coral reproductive ecology and thermal tolerance. <i>Dr Shelby Gantt</i>	9:25a High latitude zooxanthellae of west Pacific corals are different from those in subtropics and tropics.. <i>Prof Todd LaJeunesse</i>	9:25a High latitude zooxanthellae of west Pacific corals are different from those in subtropics and tropics.. <i>Prof Todd LaJeunesse</i>	9:25a Brick by brick: The efficacy and efficiency of keeping corals alive through disease intervention. <i>Dr Karen Neely</i>	9:30a Symbiotic state and life stage alter the lipidomic profiles of <i>Exaptasia diaphana</i> . <i>Dr Erick White</i>	9:30a Mechanisms to Improve Coral Reef Resilience in Sediment- and Nutrient-Impacted Environments: A Theoretical Analysis. <i>Mr. Jacob Snyder</i>	9:30a Genomics-powered insights into diversity, ecology and evolution of coral algal symbionts. <i>A/Prof Cheong Xin Chan</i>	9:30a Somalia's First Quantitative Baseline of Coral Reef Flats: Patterns of Spatial Variability. <i>Mr AHMED SH IBRAHIM SHABA</i>	9:30a Somalia's First Quantitative Baseline of Coral Reef Flats: Patterns of Spatial Variability. <i>Mr AHMED SH IBRAHIM SHABA</i>	9:30a Reef Resilience Assessment Along India's marginal west coast reefs reveals opportunities for management. <i>Mr Farai Divan Patel</i>	
9:30a Heat at depth: unprecedented thermal anomalies of summer 2024 trigger mass mortality of <i>Paramuricea clavata</i> (Risso, 1826) in the Mediterranean Sea. <i>Mr Andrea Toso</i>	9:30a Artificial Shading Improves Photophysiological Performance and mitigates Bleaching of Nursery Corals during the 2025 Extreme Bleaching Event in Mauritius, Western Indian Ocean. <i>Mr Shakael Yavan Jogee</i>	9:30a Model but complex: Cryptic lineages in the widely studied coral <i>Galaxea fascicularis</i> (Scleractinia: Euphyllidae) across the Arabian Seas and western Indian Ocean. <i>Dr Nicolas Oury</i>	9:30a Cryptic diversity and high morphological plasticity in <i>Pocillopora</i> reef-building corals in the Eastern Tropical Pacific. <i>Dr David Paz-Garcia</i>	9:30a Physiological and thermal tolerance plasticity differs across cryptic coral lineages. <i>Adrian Cheh</i>	9:30a Ensemble Deep Learning for Large-Scale Coral Reef Mapping: Increasing Thematic Detail with Hyper-Spectral Imagery in an Island-wide Survey. <i>Dr Daniel Schürholz</i>	9:30a Ensemble Deep Learning for Large-Scale Coral Reef Mapping: Increasing Thematic Detail with Hyper-Spectral Imagery in an Island-wide Survey. <i>Dr Daniel Schürholz</i>	9:30a Vulnerability of Pacific reefs to stony coral tissue loss disease. <i>Dr Michael Studvan</i>	9:30a Symbiotic state and life stage alter the lipidomic profiles of <i>Exaptasia diaphana</i> . <i>Dr Erick White</i>	9:30a Mechanisms to Improve Coral Reef Resilience in Sediment- and Nutrient-Impacted Environments: A Theoretical Analysis. <i>Mr. Jacob Snyder</i>	9:30a Genomics-powered insights into diversity, ecology and evolution of coral algal symbionts. <i>A/Prof Cheong Xin Chan</i>	9:30a Somalia's First Quantitative Baseline of Coral Reef Flats: Patterns of Spatial Variability. <i>Mr AHMED SH IBRAHIM SHABA</i>	9:30a Somalia's First Quantitative Baseline of Coral Reef Flats: Patterns of Spatial Variability. <i>Mr AHMED SH IBRAHIM SHABA</i>	9:30a Reef Resilience Assessment Along India's marginal west coast reefs reveals opportunities for management. <i>Mr Farai Divan Patel</i>	
9:35a Impacts and recovery trajectories from the third and fourth global coral bleaching events at Aldabra Atoll, Seychelles. <i>Dr Anna Koester</i>	9:35a Artificial Shading Improves Photophysiological Performance and mitigates Bleaching of Nursery Corals during the 2025 Extreme Bleaching Event in Mauritius, Western Indian Ocean. <i>Mr Shakael Yavan Jogee</i>	9:35a From fish to fisheries: rethinking catchability in a changing world. <i>Ms Zoe Storm</i>	9:35a Reef Fish Nutrient Content Across Indonesia and the Philippines: Unprecedented Nutrient Dynamics Under Climate Change. <i>Miss Pindah Talitha Vida</i>	9:35a Exploring how cryptic diversity interacts with environment and mitigates Bleaching coral reproductive ecology and thermal tolerance. <i>Dr Shelby Gantt</i>	9:35a High latitude zooxanthellae of west Pacific corals are different from those in subtropics and tropics.. <i>Prof Todd LaJeunesse</i>	9:35a High latitude zooxanthellae of west Pacific corals are different from those in subtropics and tropics.. <i>Prof Todd LaJeunesse</i>	9:35a Brick by brick: The efficacy and efficiency of keeping corals alive through disease intervention. <i>Dr Karen Neely</i>	9:30a Symbiotic state and life stage alter the lipidomic profiles of <i>Exaptasia diaphana</i> . <i>Dr Erick White</i>	9:30a Mechanisms to Improve Coral Reef Resilience in Sediment- and Nutrient-Impacted Environments: A Theoretical Analysis. <i>Mr. Jacob Snyder</i>	9:30a Genomics-powered insights into diversity, ecology and evolution of coral algal symbionts. <i>A/Prof Cheong Xin Chan</i>	9:30a Somalia's First Quantitative Baseline of Coral Reef Flats: Patterns of Spatial Variability. <i>Mr AHMED SH IBRAHIM SHABA</i>	9:30a Somalia's First Quantitative Baseline of Coral Reef Flats: Patterns of Spatial Variability. <i>Mr AHMED SH IBRAHIM SHABA</i>	9:30a Reef Resilience Assessment Along India's marginal west coast reefs reveals opportunities for management. <i>Mr Farai Divan Patel</i>	
9:40a Evaluating the past decade of heat stress on World Heritage reefs – projection and realisation. <i>Prof Scott Heron</i>	9:40a Artificial Shading Improves Photophysiological Performance and mitigates Bleaching of Nursery Corals during the 2025 Extreme Bleaching Event in Mauritius, Western Indian Ocean. <i>Mr Shakael Yavan Jogee</i>	9:40a From fish to fisheries: rethinking catchability in a changing world. <i>Ms Zoe Storm</i>	9:40a Reef Fish Nutrient Content Across Indonesia and the Philippines: Unprecedented Nutrient Dynamics Under Climate Change. <i>Miss Pindah Talitha Vida</i>	9:40a Exploring how cryptic diversity interacts with environment and mitigates Bleaching coral reproductive ecology and thermal tolerance. <i>Dr Shelby Gantt</i>	9:40a High latitude zooxanthellae of west Pacific corals are different from those in subtropics and tropics.. <i>Prof Todd LaJeunesse</i>	9:40a High latitude zooxanthellae of west Pacific corals are different from those in subtropics and tropics.. <i>Prof Todd LaJeunesse</i>	9:40a Brick by brick: The efficacy and efficiency of keeping corals alive through disease intervention. <i>Dr Karen Neely</i>	9:30a Symbiotic state and life stage alter the lipidomic profiles of <i>Exaptasia diaphana</i> . <i>Dr Erick White</i>	9:30a Mechanisms to Improve Coral Reef Resilience in Sediment- and Nutrient-Impacted Environments: A Theoretical Analysis. <i>Mr. Jacob Snyder</i>	9:30a Genomics-powered insights into diversity, ecology and evolution of coral algal symbionts. <i>A/Prof Cheong Xin Chan</i>	9:30a Somalia's First Quantitative Baseline of Coral Reef Flats: Patterns of Spatial Variability. <i>Mr AHMED SH IBRAHIM SHABA</i>	9:30a Somalia's First Quantitative Baseline of Coral Reef Flats: Patterns of Spatial Variability. <i>Mr AHMED SH IBRAHIM SHABA</i>	9:30a Reef Resilience Assessment Along India's marginal west coast reefs reveals opportunities for management. <i>Mr Farai Divan Patel</i>	
10a–10:30a	Morning Tea Day 5													
10:30a – 12p	5B #130 Dynamics of coral bleaching and coral community structure in a rapidly warming ocean	5B #35 Climate-smart reef restoration: Integrating climate resilience into coral reef restoration practices	5B #52 Exploring the sustainability and resilience of coral reef fisheries	5B #26 Cryptic diversity, hybridization, and chimerism and their influence on ecology and evolution	5B #81 Predicting coral response to climate perturbations through trait-based assessments	5B #96 Escaping climate change: The effect of latitudinal gradients, on organismal physiology, ecology, and evolution	5B #123 The human–AI nexus: Scaling trustworthy coral reef monitoring and management	5B #29 Innovations in coral disturbance preparedness and response	5B #65 Understanding development across biological scales of coral and other marine invertebrates	5B #98 Eco-evolutionary responses of reef organisms to anthropogenic climate change	5B #19 Modeling coral reef ecosystems across scales	5B #93 Microbial symbiosis in the reef: what do we know and where do we go?	5B #104 Inter-kingdom interactions in the coral holobiont	5B #116 Biodiversity and transformation in Indian Ocean coral reefs
	10:30a Spawless Summer: A Post-Bleaching Coral Spawning Assessment in the Northern US Virgin Islands. <i>Ms Courtney Tierney</i>	10:30a Assessing the potential of alkalinity enhancement to support coral reef restoration: synthesis, baseline data, and a coordinated research framework for Florida. <i>Dr Tyler Czynak</i>	10:30a Archetypal trajectories of socioeconomic change in coral reef fisheries. <i>Dr Bess</i>
